

Process

We develop audio datasets with *the same rigor* researchers bring to models.

1.

Hypothesize

Develop a perspective on a new capability we believe audio models should have.

ii

Design

Architect a shape of data that would teach models that capability when trained on.

ii.

Experiment

Leverage our platform, speaker network, and quality operation to launch a targeted data collection.

Our datasets are used by Fortune 10 companies and research labs that work with speech recognition, translation, synthesis, and conversational AI.

③

③ ——— Featured datasets

Datasets designed for speech-to-speech, multilingual, and voice interaction systems

A multilingual dataset with over 1,000 hours of conversation per language, spanning 17+

A dataset of conversations involving three or more speakers. Originally designed for

④ — Careers

Join us on our mission to
change what's possible
with audio AI

We're an audio data research company,
developing datasets to fuel the world's
leading audio AI models.
