

Using immune organoids and AI
to design drugs that work in
people from the start.

- OUR MISSION
- HUMAN IMMUNOLOGY
- ANIMALS DON'T WORK
- BETTER TECH EXISTS
- ORGANOIDS + AI

Drug discovery is a broken system. We
deliver safe, effective therapies without a
clinical trial. Using immune organoids and
AI to design drugs that work in people from
the start.

Organoids are the future of
pharma. Learn about the
future today.

Turning drug makers
into optimists

By shifting immunotherapy discovery into
organoids we will be discovering drugs in
humans, radically raising the chance that a
drug makes it to patients.

Faster, cheaper, and

Using human data on day one means more
effective therapies with lower side effects
