an adjustable pedal assembly (22) having a pedal arm (14) moveable in fore and aft directions with respect to said support (18);

Abstract 1:14-27 4:15-37 7:1-43 7:44-64 8:32-55 Figure 5

4.2

Asano '782 discloses "an adjustable pedal assembly having a pedal arm moveable in fore and aft directions with respect to said support":

1:14-27

There has been proposed a pedal assembly which enables a driver to adjust a position of the pedal according to his or her height. This is required since if the driver's seat is adjusted forwardly or rearwardly to match his or her height, the visual field is varied corresponding to the seat position which is not preferable in view of safety as well as the driving comfortable. Further, if the driver's seat is moved rearwardly, the leg space for a passenger sitting on the rear seat becomes inevitably narrow. Accordingly, there have been required such a pedal assembly which makes it possible to adjust the position of the pedal forwardly and rearwardly.

Claims

View by Limitation

Terms (27)

1

An adjustable pedal assembly for a vehicle comprising;
a support (18) for mounting to a vehicle structure;
an adjustable pedal assembly (22) having a guide member (62) rotatably supported by said support (18) for pivotal movement about a pivot axis (26); and
a pedal arm (14) supported on said guide member (62) for rectilinear movement in fore and aft directions relative to said support (18), said guide member (62) and said pivot axis (26) between various adjusted positions;
an electronic control (28) supported on said support (18) and responsive to pivotal movement of said pedal arm (14) and said guide member (62) about said pivot axis (26),
said electronic control (28) being fixed relative to said support (18) such that said pedal arm (14) moves in fore and aft directions with respect to said electronic control (28), said electronic control (28) being responsive to pivotal movement of said guide member (62) about said pivot axis (26) for providing a signal (32) that corresponds to pedal arm (14) position as said pedal arm (14) pivots said guide member (62) about said pivot axis (26).

2

support

a structural element configured to be mounted to a vehicle, serving as the mounting base for other components such as an adjustable pedal assembly and an electronic throttle control, and which may be implemented as a bracket, housing, or combination of support members

adjustable pedal assembly

a component of a vehicle control pedal assembly that includes a member pivotally supported by a fixed support and a pedal arm that moves in fore and aft directions, thereby allowing the pedal position to accommodate different driver needs while interfacing with a vehicle control system for throttle operation
